

INFORMATION ABOUT CLINICAL TRIALS

Results from the Patient and Caregiver Clinical Trial Survey

National Brain Tumor Society conducted an online survey to determine the level of **knowledge, experience, and perceptions** of brain tumor patients and caregivers with respect to education and participation in clinical trials. The results of our survey underscore the need for better resources and decision support that will enable all patients to be more fully informed about their diagnosis, treatments options, and the importance of their participation in appropriately matched clinical trials.

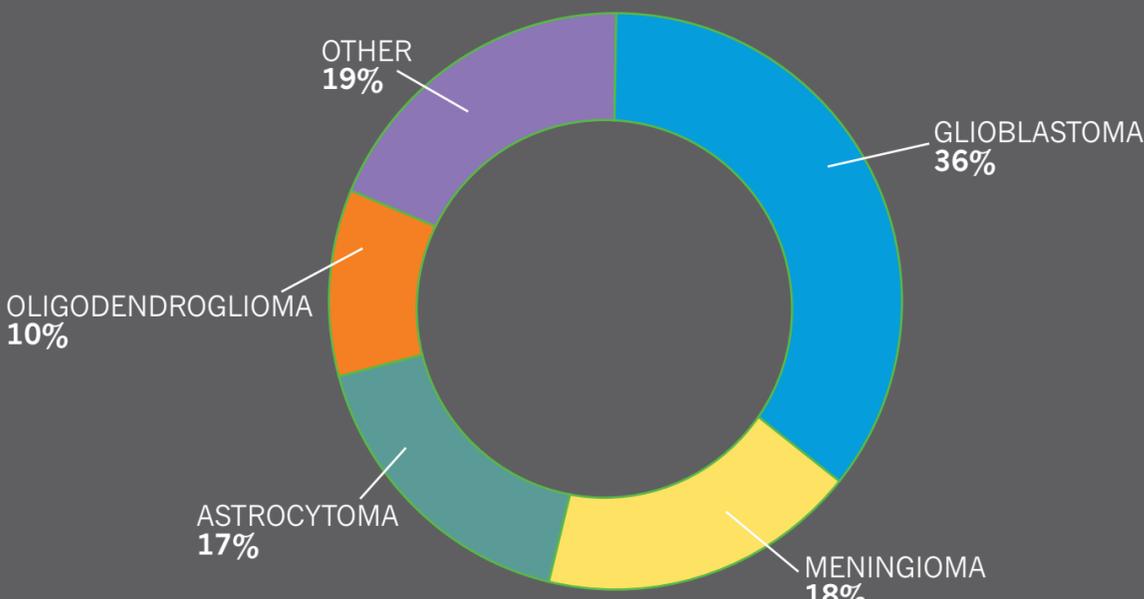

WHO TOOK THE SURVEY?

1463
TOTAL PATIENTS & CAREGIVERS

BRAIN TUMOR PATIENTS IN SURVEY

WHICH TYPE OF BRAIN TUMOR DO PATIENTS REPORT HAVING?

DID THE MEDICAL PROVIDER DISCUSS CLINICAL TRIALS?

Only 42% of patients were informed about clinical trials by their medical team

36% of patients NEVER discussed clinical trials with their provider

WHO PARTICIPATED IN BRAIN TUMOR CLINICAL TRIALS?

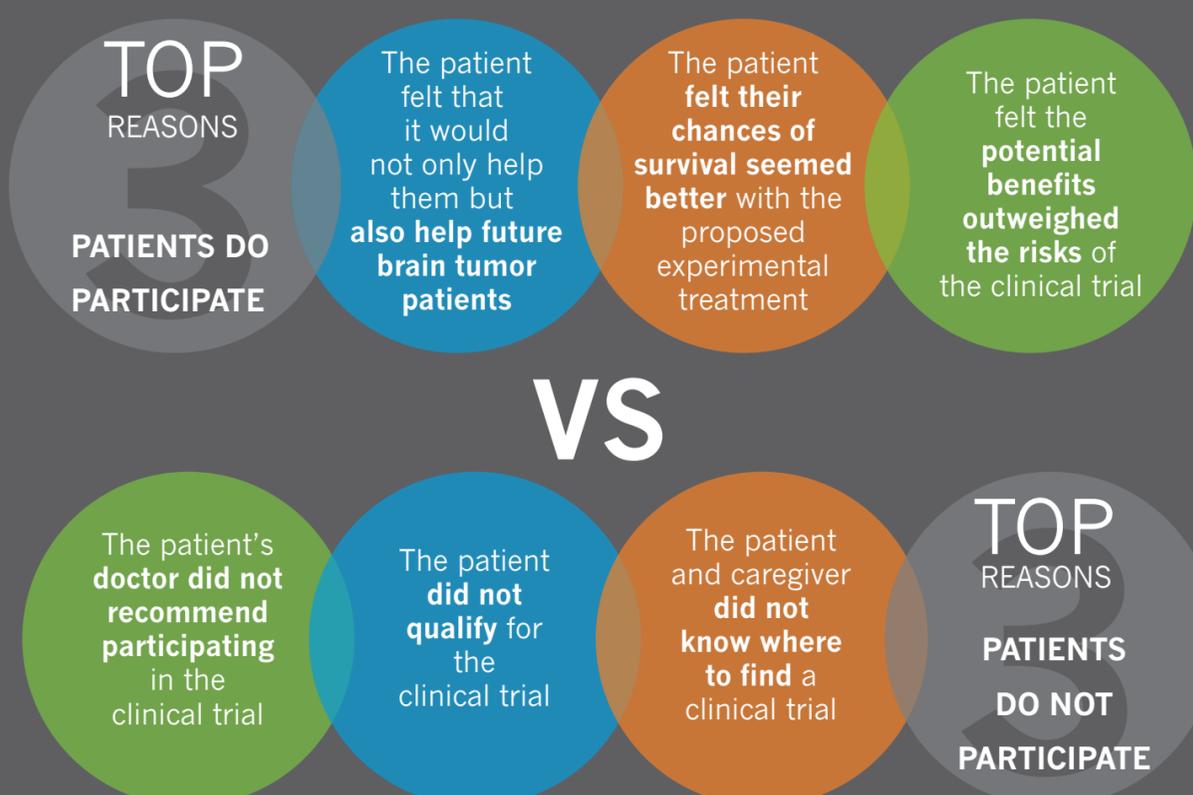

21% of all patients surveyed participated in a clinical trial for a brain tumor

WHEN WERE CLINICAL TRIALS DISCUSSED?

Only around 24%
of patients were informed about
clinical trials at the time of diagnosis

WHY DO PATIENTS PARTICIPATE OR NOT PARTICIPATE IN CLINICAL TRIALS?

CALL TO ACTION

- It is important for brain tumor patients and caregivers to be **made aware of all treatment options, including clinical trials, early in their journey** so that they have the opportunity to find a treatment that may be effective for them, and for future patients.
- The results of our survey have highlighted clear gaps in terms of patient awareness and participation in clinical trials and underline the need for NBTS to launch a program that will enable all patients to be fully informed about their diagnosis, treatment options, and the importance of their participation in appropriately matched clinical trials.
